SERIES SAGA 150

SLIDING DOOR SYSTEMS FOR THE
ARCHITECTURAL AND DESIGN SECTORS

↳ SAGA hanger and track have a unique and strong streamlined nordic look.

Series to gain high quality nordic design for heavy doors

SAGA series is designed for heavy interior and exterior applications for areas where high corrosion resistance and architectural design is required. The anodized aluminium track and parts of 25 microns and the steel parts of acid-proof AISI 316 L quality guarantee durability up to maritime conditions.

This series durable track for timber and metal door assemblies is for 150 kg weight capacity. The series is an ideal solution for residential and commercial spaces, as well as luxurious villas on seashores where large openings are covered with design doors.

Concave reinforced nylon wheels with precision bearings sliding on an aluminum profile gives a silent and light sliding action. Slide-on wall fixing brackets and groove for brush seals ease and quicken the installation.

Minimalistic design

SAGA series is designed to achieve a minimalistic and clean look. The tracks small size and firm shape together with the adjustable low headroom plate allow door installations from floor to roof, creating an impression of a movable wall.

Soft close up to 150 kg

SAGA soft close system provides the final touch of luxurious feeling to the complete sliding door set. The soft close mechanism is for doors weighting up to 150 kg. No additional fittings are needed on the door or frame as the system is installed completely inside the track.

” Quality is determined in the details

Application examples

- » Room dividers for conference facilities
- » Sliding doors for official premises and foyers
- » Sliding applications for corrosive environments
- » Design sliding doors for Villas
- » Sliding doors for big wardrobes
