

Hardware for sliding and folding shutters

Quality combined with creative design and stylish architectural solutions

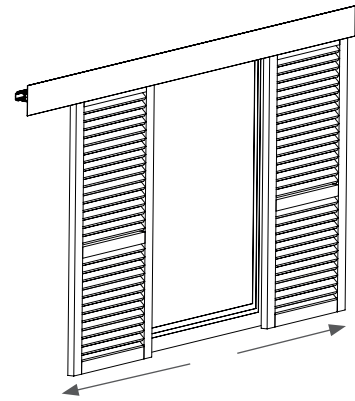

“Sliding innovations that make the world move”

In modern façade design, detailed finishing, visibility and practicality play an important role. With different kind of sliding shutters, screens and panels, new levels of attractiveness, protection and variation can be achieved for buildings.

Sun protection shutter systems protect the building from excessive heat, light and dazzle, whilst still maintaining visibility to the exterior spaces. Energy savings are also made as the demand for air conditioning is reduced. In turn, various types of shutters and screens are used to increase the security for ventilation windows and balcony doors. All this can be achieved easily when using Helaform's high quality products.

Sliding shutters

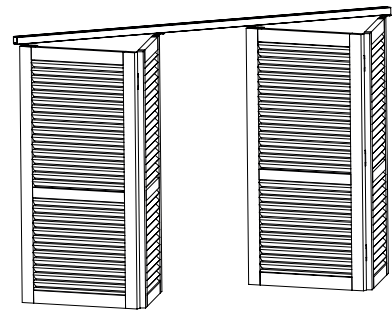

Our products are suitable for straight sliding safety screens, as well as sun and weather protective shutters, which are used to secure or to protect the building efficiently from the heat of the sun and therefore increase the comfort of the people inside. This protection is also easily adjustable according to the time of the year and variable weather. A new dimension, plus a more modern and prestigious look are gained when using window shutters and panels on the building's façade. Also available is our very clever Syncro-mechanism, which allows the window shutters to open and close symmetrically, with a one-handed movement.

Key specifications

Maximum sliding shutter weight 100 kg

Maximum sliding shutter thickness 20 – 40 mm

Key specifications

Maximum leaf weight 25 kg

Maximum leaf thickness 20 – 40 mm

Folding shutters

A window shutter or exterior panel equipped with a sliding and folding mechanism offers privacy and protection when it is needed. The mechanism can be used with a two or four leaf window shutter or panel. Easy manually operated systems, which require very little space when the shutters are in the opened position.

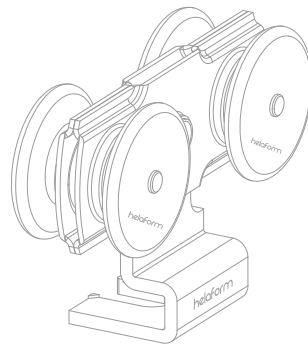

- Helaform products, designed for use with sliding shutters, offer you a smooth, trouble and maintenance free system that will protect your building from the elements for many years to come.
- They have been specifically designed for outside use and offer full corrosion resistance.
- Installation is quick and simple, being equally suitable for wall or ceiling fixing. For ceiling fixing the track can be screwed directly to the underside of the window/door lintel.
- Our specially designed wall fixing brackets just slide into a groove in the top of the track, accelerating and simplifying the installation time.
- We also offer a clip-on cover panel, in two finishes, that attractively hides both the track and the mechanism, on one or both sides of the track.
- A large selection of bottom guides are available to solve any installation or design necessity.

Company

information

- Founded in 1983
- Privately owned family company
- Ethical and eco-friendly business policies
- Market leader in Finland
- Export over 50% of production and products being sold or used in over 50 countries around the world
- Professional service and technical support
- Guaranteed fast delivery of goods
- Complete range of sliding door systems and accessories, for doors of wooden, metal or glass construction
- High quality products are designed for long life, quiet operation and extremely easy installation
- In-house product development and production allows manufacture of specialist products to market demands
