

helaform®

THE SLIDING SOLUTIONS YOUR DOOR DESERVES

PRODUCT CATALOGUE

HELAFORM was founded in 1983 in Helsinki, Finland. Since its foundation, the company has become the market leader in the Nordic market. Nowadays, Helaform is an internationally well-known brand, with products being supplied to retail and industrial outlets and the commercial and agricultural sectors through its outstanding worldwide network of distributors and agents in Europe, Asia and the Middle-East.

The company's success is driven by excellent service, high-quality products and long-term partnership creation. Due to this, the company has also been recognised for its responsible and sustainable business activities. Such certificates include the High Credit Rating, Design from Finland, Made in Finland and The Strongest in Finland, which are only granted to a small number of companies. The products comply with all industry standards, including the European Standard EN 1527 / EN 1527-2013.

Quality and reliability

High-quality, EU-manufactured products that are tested by independent research laboratories (VTT). Having our own production allows quality control from design to manufacturing all the way to the customer. The reliability is guaranteed by certainty of supply and with a 10-year limited warranty.

Parternship and technical know-how

Technical customer service and long roots in the industry secure the most cost-effective solution for the customer. Long-term partnership creation together with in-house product development allows tailored products to be made for specific market needs.

------------------------------	-----

SERIES INTRODUCTION

Lightweight sliding door systems

30 / 40

Wardrobe and furniture doors for apartments

An ideal choice for light-timber wardrobe or cupboard installations. Wardrobe sliding doors are practical in small spaces and hide shelves leaving a stylish end result. With these series, you can install several sliding doors e.g for your wardrobes.

75

Interior doors and room dividers for apartments and public spaces

75 series is a versatile series for almost all interior and room dividers for use in homes or public spaces. By combining parts within a **75 Flow series**, a solution can be created that is just right for the customer's interior design and functionality needs. **The 75 steel parts**, on the other hand, offer products suitable for outdoor use, for example, for sliding doors in courtyards and external canopies.

RETRÖ / SKANDI

Interior doors and room dividers for apartments

Fittings set RETRÖ is a stylish system for interior sliding doors, which create spectacle in your home. Retrö resembles a mechanism familiar from barn doors with a modern updated appearance, with which you can use either new flat sliding doors or an old barn door. The striking black-painted steel parts stand out immediately to the eye, acting as an interior element in itself.

Fittings set SKANDI is an elegant track system that includes stainless steel-colored parts and whose elegant design fits perfectly into a modern interior. Skandi has its own sets for wooden doors and glass doors.

SAGA

Custom doors and room dividers for apartments and public spaces

SAGA is designed for spaces where you want a stylish and high-quality solution. For example, for high-quality, custom-made, solid-wood doors, SAGA offers a premium sliding track system. The most common use of the series is in apartments, but due to the high load capacity of the system, it is also used in public spaces, such as galleries, showrooms and exhibition spaces, where the sizes of doors / partitions may be large. The 316L stainless-steel parts of the series allow the system to be installed even in the most demanding conditions.

SERIES INTRODUCTION

Heavyweight sliding door systems, folding door systems and applications

100 / 150

Medium-heavy interior and exterior doors for commercial and industrial spaces

Series 100 and 150 are medium-heavy series. Thanks to their load-bearing capacities with these series you can install heavier sliding doors, partition doors and partition walls for outdoor as well as indoor use. Sliding doors and space dividers for industrial warehouses and canopies are conveniently built with the sliding track systems of these series. In addition, these series are suitable for, e.g. sliding doors in agricultural buildings as well.

300 / 500 / 900 / 2000

Heavy interior and exterior doors and space dividers for commercial and industrial spaces

Series for heavy sliding doors, space dividers and transfer walls. 2000 series hangers with load capacity up to 2,000 kg is available, which allows for the installation of really large and heavy sliding doors in, for example, the largest industry and logistics centres. Durable and high-quality parts of Helaform make possible the light and safe use of sliding doors.

FOLDING DOOR SYSTEMS

Folding doors for apartments and industrial spaces

Folding door systems for apartments, industrial and storage buildings are space-saving and economic solutions. In areas where there is no space for sliding doors on the sides of the door opening, folding doors are perfect for saving space. Folding door systems use the same high-quality tracks as sliding door systems.

APPLICATIONS

Industrial curtain systems

Industrial curtain systems are maintenance-free and functional solutions for various types of industry protective and storage curtain systems.

Conveyor systems

Conveyor systems are flexible and easy to modify. Conveyor tracks can be used in agriculture, gardens, furniture industry, photo studios, paint shops, theatres, etc.

Cable trolley systems

Flat and round cable trolley systems can be used in various cranes such as bridge cranes, booms, studio lighting and in industrial facilities.

Accordion door systems

Accordion door systems are used in room dividers, cabinets and hallways. Such a need can be found in homes, schools, offices and other public spaces.

FITTINGS SETS

Complete Do-It-Yourself packages

- All required parts for an installation in one package
- Stylish and informative packaging
- Compact package size to minimize store shelf space requirement
- Options for a wide variety of doors

Helaform fittings sets are colour coded and have informative labels so that the customer can easily choose the most suitable one. The DIY-package range includes solutions for the most common wardrobe and partition needs.

In stores, the visual and colourful design of Helaform's fittings sets package pops out as well as minimizes the required store shelf space.

Store display provides sales support and useful information to help the customer choose the right product for the need.

Check out more information and availability of our fittings sets from www.helaform.com

SLIDING DOOR INFO

Determining a sliding door system and parts

The installation space & environment

The installation environment determines which materials should be used (e.g. Al, Fe or AISI) and how to install the system while the available space affects the sliding solution itself (e.g. straight sliding, folding door, accordion type door, etc.).

Design & functionality

The design requirements affect the selection of the suitable sliding fittings and vice versa. Adding functionalities such as Soft Close enhances the usability of the door.

Door size, construction & weight

The door's width affects the track length, while the door's construction affects the suitable fittings and guides.

The door's weight determines the product Series to use. *(Note! In exterior installations please note the wind loads).*

6 steps to specify single sliding door system:

1. Sliding track enables the door movement

Track length is twice the width of the door opening.

2. Brackets to install and support the track

Brackets are used to install the track to wall or soffit. The number of brackets depends on the product Series (bracket interval in the track is min. 500-1000 mm). Aluminium (and 75 steel) tracks can be fixed to soffit straight through the track.

3. Hangers slide the door

Hangers are specified 2 pcs per door. In general, nylon wheels are recommended for interior and steel wheels for exterior use. Hangers are fixed to the door from the bolt or by using fixing plates.

4. Track stops limit the door movement

Track stops are specified 2 pcs per door.

5. Bottom guide guides the door movement

Sliding doors always require a bottom guide, which can be either floor or wall fixed. The bottom guide's purpose is to guide the door movement according to the track line.

6. Design and functionality with the accessories

Cover plate hide the track system, so that only the door and the elegant cover plate remain visible. **Soft Close** closes or opens the door slowly and smoothly.

SLIDING DOOR SYSTEMS

Wardrobes

SERIES 30

Wardrobes

An ideal choice for light-timber wardrobe or cupboard installations. This series includes a set in an easy-installation package which includes all the components needed for one door with different track options available depending on the door width. Wardrobe sliding doors are practical in small spaces and hide shelves leaving a stylish end result.

Datasheet

30

Specifications

Weight (max.capacity)	45 kg / door
Door thickness	16-40 mm

-  Hangers with nylon wheels.
Lubricated for life ball bearings.
-  Aluminium track

Fittings sets	Track length	Door width (max.)	Code
Fittings set with sliding door 365	1500 mm 1800 mm	750 mm 900 mm	10303 10304

The package components are presented separately on page 26.

SERIES 40

Wardrobes

Designed for light-timber wardrobe and cupboard doors where two or more doors overlap each other. This series has an easy-installation package which includes all the necessary components for two or three doors. These sets are available in different track lengths depending on the door width. Wardrobe sliding doors are practical in small spaces and hide shelves leaving a stylish end result.

Datasheet

75 JUNIOR

■ Apartments and commercial spaces

The 75 Junior fittings set is suitable for **light interior sliding doors**. The set is mainly used in simple door installations where no special features are needed. The quality 1.5 mm thick aluminium track gives the track a maximum weight capacity of 50 kg. Due to the track's size, it also fits into small spaces.

Datasheet

75 Junior

Specifications

Weight (max.capacity)	50 kg / door
Door thickness	20-40 mm
Bracket interval (max.)	500 mm

Hangers with nylon wheels.
Lubricated for life ball bearings.

Aluminium track

Zinc plated (min. 8 µm) steel parts. Tested in salt water spray chamber (240 h).

Fittings sets	Track length	Door width (max.)	Code
Fittings set with track 75 Junior	2000 mm	1000 mm	20705

The package components are presented separately on page 44.

75 FLOW

One series, many solutions

APPEARANCE

Leave the track visible

With the **LHP adjustable plate**, the distance between the door and the track can be adjusted to a minimum, allowing the appearance to continue in style from track to door, creating an almost seamless look for your sliding door. This feature is also perfect for ceiling-concealed track installation.

Hide the track

The **cover plate** hides the track system, so that only the door and the elegant cover plate remain visible. Cover plates are available in a straight and curved versions that cover the track system also from above. The cover plate is simply clicked into place without any need for screws.

Create your own style

When you want to create a sliding door just for your interior, for example, so that the cover plate fits with the door or wall design, a **facing board holder** can be used. With it, you can install your own cover plate (with a certain color or material) to hide the track.

FUNCTIONALITY

The **Soft Close** closes the door slowly and smoothly. This feature also brings safety and durability to the door use.

The **Soft Stop** stops the door lightly, damping it and catching it from the hanger, keeping the door closed or open.

Syncroduo allows two doors to move on one track so that the doors open simultaneously by moving only one door.

75 FLOW

■ Apartments and commercial spaces

A stylish and versatile series for indoor use when you want to leave the track visible, embed it in the ceiling, for example, or make a cover plate on the track yourself. This set also includes additional mechanisms such as a Soft Close and Soft Stop. All these features add to the ease of installation and comfortable usage of the system. This set is used with wood, aluminium and composite doors.

Datasheet

75 Flow

(Products 20708 and 20709)

Specifications

Weight (max.capacity)	75-100 kg / door
Door thickness	12-60 mm
Bracket interval (max.)	500 mm
Door width (min.) when using 1 Soft Close	500 mm
Door width (min.) when using 2 Soft Close	750 mm

-  Hangers with nylon or steel wheels. Lubricated for life ball bearings.
-  Aluminium or anodized aluminium track
-  Zinc plated (min. 8 µm) steel parts. Tested in salt water spray chamber (240 h).

75 Flow

(Products 20620, 20621, 20622 and 20636)

(Products 20620, 20621, 20622 and 20636 with soffit fixing)

COVER PLATE SET 75 FLOW

■ Apartments and commercial spaces

Cover plate set 75 Flow is an ideal choice when you want a functionally complete system and track hidden with a ready-made cover plate to complete the look. The most typical uses for the series are **apartments, kindergartens, nursing homes, hospitals and offices**. A version with a Soft Close is also available in the fittings sets. Cover plates are available with straight or curved cover plates.

Specifications

Weight (max.capacity)	75-100 kg / door
Door thickness	12-50 mm
Bracket interval (max.)	500 mm
Door width (min.) when using 1 Soft Close	500 mm
Door width (min.) when using 2 Soft Close	750 mm

Hangers with nylon or steel wheels. Lubricated for life ball bearings.

Aluminium track and powder coated aluminium cover plate

Zinc plated (min. 8 µm) steel parts. Tested in salt water spray chamber (240 h).

Cover plate set 75 Flow (RAL 9010) (Includes Soft Close)	2100 mm	1050 mm	20636

The package components are presented separately on page 44.

75 STEEL

■ Apartments and commercial spaces

This series is suitable, for example, for sliding doors in yard and outdoor warehouses where a durable and simple sliding door system is required. The track can be fixed to the wall with brackets or directly from the track to the ceiling. With nylon hangers, it is also suitable for interior doors. Suitable for use with wood, metal and composite doors.

Datasheet

SERIES SAGA 150

■ Apartments and commercial spaces

This series is designed for heavy interior and exterior applications for areas where high corrosion resistance and architectural design are required. Typically this series is used for **residential** and **commercial spaces** like in **showrooms** and **galleries** as well as in luxurious villas on the seaside. The series also includes the popular Soft Close mechanism and a Low-Headroom Plate for a final touch of luxury. Anodized aluminium up to 15-20 microns and acid-proof stainless steel AISI 316 L quality guarantee corrosion resistance up to maritime conditions.

Datasheet

SAGA 150

Specifications

Weight (max.capacity)	150 kg / door
Door thickness	20-60 mm
Bracket interval (max.)	500 mm
Door width (min) when using 1 soft close	500 mm
Door width (min) when using 2 soft close	750 mm

-  Hangers with nylon wheels with 440C precision bearings and steel body AISI 316 L-quality.
-  Galvanized (15-20 µm) aluminium track, bracket and stop.
-  AISI 316 L-quality steel parts.

SERIES SAGA 300

■ Apartments and commercial spaces

This extremely durable series is designed for heavy interior and exterior applications. Typically this series is used in **entrance halls, galleries** and **auditoriums** where durable and stylish sliding systems are required. Due to the series high corrosion resistance and durability for up to 300 kg weight capacity, this series can also be used in **extreme weather conditions**, for example in sliding doors on **seaside villas**. Anodized aluminium up to 15-20 microns and acid-proof stainless steel AISI 316 L quality guarantee corrosion resistance up to maritime conditions.

Specifications

Weight (max.capacity)	300 kg / door
Door thickness	25-60 mm
Bracket interval (max.)	500 mm

Hangers with nylon wheels with 440C precision bearings and steel body AISI 316 L-quality.

Galvanized (15-20 µm) aluminium track, bracket and stop.

AISI 316 L-quality steel parts.

Soft Close — Silent and effortless opening and closing

The Soft Close system provides the final touch of luxurious feeling to the complete sliding door set. The system is similar to what we are used to in our kitchens that we love; slowly, silently and gently opening and closing the drawer is now available for sliding doors up to 150 kg.

The 75 Flow Series has two Soft Close options: blue for lighter interior doors with a load capacity of 75 kg and black up to 100 kg. Now you can choose a Soft Close to better match the weight of your door. The Soft Close mechanism can be disassembled from the hanger, stored separately, or install it on an existing hanger.

The Soft Close of the SAGA series is suitable for interior doors and thanks to its corrosion resistance also for outdoor use. Robust construction and high-quality parts can even soften a 150 kg door's closure.

- Moves the door gently and evenly towards the open or closed position without user assistance
- Mechanism is installed completely inside the track
- Makes the sliding door safer with less risk of accidentally trapped fingers
- Easy to install as it comes already assembled into the hanger but can be installed retrospectively as well

Available in series:

- **75 Flow** (page 36)
- **SAGA 150** (page 54)

Soft Stop — New generation stop with a damper

This small mechanism provides additional comfort for the sliding door. The Soft Stop has two comfort-enhancing features: the Clip Stop feature, where the “cloves” catch the hanger, preventing the door from bouncing back when closing / opening the door, and a small damping pump that slows the door movement when it comes to a stop. Up to 100 kg doors.

The Soft Stop is easy to install and fits completely inside the sliding track, leaving a finished look for the whole system.

- Stops the door softly and keeps the door open / closed
- Mechanism is installed completely inside the track
- Easy to install

Available in series:

- **75** (page 30)
- Fits all 75-series sliding tracks (when using MP-75 hanger)

Low-Headroom Plate (LHP) — For a minimalistic finish

Innovative design for interior wooden doors. Minimalistic finish with all parts concealed without the need for cover plates or pelmets by **reducing the clearance between the track and the top** of the door to a minimum of 2 mm.

- Vertically adjustable plate for up to 100 kg
- Easy to install and adjust the gap between the door and the track
- The plate's small size enables thinner door thickness and less routing to be made
- Compatible with the Soft Close mechanism

Available in series:

- **75** (page 30)
- **SAGA 150** (page 54)

Syncroduo — Moves two doors at the same time

The **Syncroduo system**, where a pair of sliding doors, hanging on one track, are connected to each other so that both doors open simultaneously by moving just one leaf. The Syncroduo system fits completely inside of the sliding track. Also available with Soft Close.

- You can quickly open a larger doorway
- Mechanism is installed completely inside the track
- No extra mountings needed on the door or the frame
- Also available in pre-installed

Available in series:

- 75 (page 30)
- SAGA 150 (page 54)

Colour options — Pick the right colour for you

The SAGA series is designed so that the sliding track acts already as a design element. By anodizing or powder coating the track, the combined options with the door are limitless. We offer from stock natural anodized and black anodized colours. Other colours are custom made.

Available in series:

- SAGA 150 (page 54)

SERIES RETRÖ

■ Apartments and commercial spaces

The Retrö sliding door system, combined with your stylish door, creates a focal point and adds to the look of your home. This system is a complete kit, available in two sizes: 2 and 2.4 metres. It is also possible to extend the track with a track joint, so even a larger doorway can be covered with this design package. In addition, the two doors can move in parallel with the use of double tracks and double wall brackets. The package also includes Soft Close for added comfort and safety.

Specifications

Door weight (max.)	80 kg - 150 kg /door
Door thickness	35-45 mm

FITTINGS SETS	CODE
1 x sliding track 5 (6) x wall bracket 2 x stop 2 x hanger 2 x soft close 2 x bottom guide	Fittings set with track Retrö 2 m For one door (Door width max. 1000 mm) (Door thickness max. 45 mm) 11700-0
	Fittings set with track Retrö 2,4 m For one door (Door width max. 1200 mm) (Door thickness max. 45 mm) 11701-0

ACCESSORIES		
	Handle LVM-150/Retrö, black Fixing on the door surface. (Material: Metal, powder-coated)	11720
	Flush handle UVM-150/Retrö, black Fixing in the door. (Material: Metal, powder-coated)	11721

	Track joint LKU-150/Retrö Allows seamless connection and extension of sliding tracks.	11790

SERIES SKANDI

■ Apartments and commercial spaces

SKANDI fittings set is an elegant track system with stainless steel components and a stylish design that fits perfectly into a modern interior. The set includes soft close mechanisms integrated inside the track. Thanks to them, the door opens and closes calmly and safely. This fittings set is a complete package available in two sizes: 2 and 2.4 meters. It is also possible to extend the track with a track connector, so even a larger doorway can be covered with this design package.

SLIDING DOOR SYSTEMS

Industry and agriculture

SERIES 100

Industry and agriculture

The series 100 is one of the most versatile Helaform series. It offers solutions for straight sliding doors and industrial curtains, but also for special applications such as conveyor systems, cable trolleys and watering systems. Typical door installations include external doors for **storage facilities** and **agricultural buildings**, but also **medium-weight interior partitions, sliding screens and grills**.

SERIES 150

Industry and agriculture

The 150 series is perfect for medium-weight installations thanks to its maximum capacity of 200 kg. Principal uses are **sliding screens and grills, overhead runways, horse boxes, agricultural buildings, storage systems, the shipbuilding industry**, for both interior and exterior medium-weight projects.

SERIES 300/500

Industry and agriculture

Series 300/500 is a durable and versatile system for heavy-duty industrial and logistic centre sliding doors and applications. This series is typically used in **industrial buildings** and **storage complexes**, as well as in interior solutions such as **fire doors**. These products can also be used in sliding door applications such as **conveyor systems** and **art-museum storage solutions**. The track determines the maximum weight capacity per door, so by changing the track you can easily increase the loading capacity, track K-300 is up to 300 kg and track K-500 is up to 500 kg.

Specifications

	300-series	500-series	500-series*
Weight (max.)	300 kg /door	500 kg /door	1200 kg /door
Bracket interval (max.)	1000 mm	1000 mm	500 mm

Hangers with steel wheels. Lubricated for life bearings.

Hot dipped galvanized steel track (min. 20 µm).

Zinc plated (min. 8 µm) steel parts. Tested in salt water spray chamber (240 h).

Note! The track determines the load capacity of the system per door, ie by changing the track you can easily increase the weight capacity of the system.

SERIES 900

■ Industry and agriculture

Series 900 is suitable for e.g. for sliding door systems in industry and logistics centers. The products of the series are also perfectly suited to various conveyor systems. This top-hung system moves heavy loads with ease. The parts of the series are designed so that the system is easy to install and long-lasting and safe to use. The most typical applications of the series are **industrial halls, logistics centers, storage halls, depot halls** and **shelters**, and **heavy conveyor tracks**.

Datasheet

900

Specifications

Weight (max.)	900 kg /door
Bracket interval (max.)	1000 mm

SERIES 2000

Industry and agriculture

Series 2000 is a multifunctional solution designed for loads up to 2,000 kg. This top-hung system is unique in its weight class, enabling extremely large doors and heavy objects to be moved easily. This extremely durable series is typically used in **large industrial halls, warehouse facilities, logistic centres for truck loading bays and the marine industry.**

NOTE! Bottom guides must be used with door installations.

BOTTOM GUIDE INFO

Helaform's wide range of bottom guides provide solutions for different sliding door systems. A suitable bottom guide system should always be specified at the door-design stage. A bottom guide is essential for the correct functionality of the door and it ensures the faultless and safe operation of the door as well as prevents the door from swinging. In heavy doors (over 6 meter width) always ask our sales staff for advice.

↖ The channel is fixed into the door groove.

↙ The channel is sunk into the ground.

↖ The channel is attached to the bottom of the door.

↖ The doors slides between guide rollers.

↖ The bottom guide is sunk into concrete.

Two doors slide on top of double roller guides.

FOLDING DOOR SYSTEMS

FOLDING DOOR INFO

Determining a folding door system and parts

The installation space & environment

The installation environment determines which materials should be used (e.g. Al, Fe or AISI) and how to install the system

Folding method & direction

The opening method and space requirements determines if an endfold or centrefold system should be specified. Folding door systems are folded typically one sided or as bi-parting. Floating units and entrance doors can be also specified.

Door size, construction & weight

The opening's width affects the number of door leaves while the thickness, width, height and weight per leaf determines the product Series to be used.

1. Choose the **SERIES** according to your needs:

Environment / Application examples	Max. door leaf weight (2 wheel hanger)	Max. door leaf weight (4 wheel hanger)	Max. recommended leaf dimensions	SERIES
Interior use Apartments and commercial spaces.	-	25 kg	h: 2000 mm w: 600 mm	75 (902/904)
Interior / Exterior use Commercial and industrial environments.	30 kg	50 kg	h: 2750 mm w 900 mm	100
	50 kg	75 kg	h: 3000 mm w 1000 mm	150
	75 kg	100 kg	h: 3500 mm w 1000 mm	300
	100 kg	150 kg	h: 4500 mm w 1000 mm	500

2. Choose an **ENDFOLD** or a **CENTREFOLD** system:

Endfold installation example. Uses pivot set (to allow the same width to all leaves) or hinges.

(● = Sliding hanger)

Centrefold installation example. Uses only hinges.

(● = Sliding hanger)

3. Choose the **COMPONENTS** as follows:

1 Track:

Track length is normally the width of the door opening.

2 Hangers and plates:

There are two different types of hangers: Endfold and centrefold hangers. Use one hanger per every second door leaf. Use 2-wheel hangers whenever possible (pay attention to the kg). With an uneven number of leaves the hanger closest to the swing leaf should be a 4-wheel hanger. The type of plate depends on whether the system is endfold or centrefold.

3 Pivot sets:

Pivot sets can be used only with an endfold system. If pivot sets are used, then all the door leaves can be the same width.

4 Brackets:

You can choose between wall or soffit brackets.
Number of brackets = Length of track (m) + 1 pcs, an extra bracket should be installed approximately 0.3 m from the end bracket where the door leaves stack.
Brackets are installed at a maximum of 1 metre intervals.
With series 75 the track can also be fixed directly to the ceiling.

5 Bottom guide:

A bottom guide ensures faultless and safe operation of the door and also prevents the door from swinging. A bottom guide should be installed on every second leaf. The bottom guide plate depends on if the system is an endfold or a centrefold system.

SERIES 75

Folding door systems

Folding doors save space and bring a decorative and practical solution to both public buildings and the home. Folding doors are highly suitable for commercial premises, such as **partition dividers in homes, restaurants and hotels**, or for separating the dining room from the lounge.

Specifications

Weight (max.)	25 kg /door leaf
Door leaf thickness	20-40 mm
Door leaf size (max.)	H 2000 x W 600 mm
Number of door leaves (max.)	2 pcs / side

Datasheet

902 AND 904

Folding door series 75 has two convenient DIY Fittings sets:
902 (for one, two-leaf folding door) and **904** (for two, two-leaf folding doors).
 These fittings sets are ideal to use with K-75 Junior tracks. They are easy to install and maintenance free.

Endfold installation example. (● = Sliding hanger)

Fittings set 902

- 1 x Hanger TP-75/nylon (with plate)
- 3 x Hinge TS-75
- 1 x Top pivot set YH-75
- 1 x Bottom pivot set AH-75

Track should be bought separately.

Fittings set 904

- 2 x Hanger TP-75/nylon (with plate)
- 6 x Hinge TS-75
- 2 x Top pivot set YH-75
- 2 x Bottom pivot set AH-75

Endfold installation example. (● = Sliding hanger)

Track should be bought separately.
 NOTE! If the door leaves slide to the same side, a bottom guide and channel should be used.

SERIES 100-500

Folding door systems

Folding doors for industrial buildings and warehousing applications are a space-saving and economical solution. Thanks to their convenience and security, they are really popular solutions for **warehouses**, **garages**, **workshops** and **shipyards**.

Specifications	
Weight (max.)	30-150 kg /door leaf
Door leaf thickness	25-66 mm
Door leaf size with endfold hanger (max.)	H 2750 - 4500 mm x W 900 - 1000 mm
Number of door leaves (max.)	8 pcs / side

Datasheet

100-500

In series 100-500 there are two different types of folding doors: **Endfold** and **centrefold**. The series determines the maximum weight capacity per door, so by changing the track and the hangers you can easily increase the loading capacity from 30 kg up to 150 kg. These systems are available for both interior and exterior applications.

ENDFOLD SERIES (Door leaf weight 30-150 kg)

The endfold system uses a pivot set or hinges. In this system, the maximum width is limited because the weight is distributed only to the other end. The panels can fold to either one or both sides of the opening and can also be stacked behind a reveal if required. The endfold system folds only on the other side of the opening and that is why it is the most common and the most popular system.

With steel doors, the last hanger should be welded 25 mm or 30 mm (TPE-150 or TPE-300/500 hangers) from the end of the leaf.

Endfold installation example. (● = Sliding hanger)

CENTREFOLD SERIES (Door leaf weight 30-150 kg)

The **first panel is half-leaf**, hinged to the post and the remaining leaves are full-size. The leaves are hung centrally under the lintel, and they fold to both sides of the opening.

Centrefold installation example. (● = Sliding hanger)

APPLICATIONS

INDUSTRIAL CURTAIN SYSTEMS

Applications

Helaform offers a range of high-quality industrial curtain systems. These industrial curtain systems are maintenance free and effective solutions for industries where protective or space-dividing curtains are required. Typically these curtain systems are used in **outdoor storages, washing and welding facilities, sports halls and theatres.**

CONVEYOR SYSTEMS

Applications

Helaform's conveyor systems are highly flexible and easily adjustable, reducing the workload and improving productivity. They are simple in design, layout and installation. **Production plants** such as **assembly lines** and **painting facilities** as well as **agricultural buildings** and **farms** are some of the many locations for conveyor solutions.

CABLE TROLLEY SYSTEMS

Applications

Flat and round cables and hoses can be carried by using cable trolleys with the series 100 sturdy track profile. Such carriers are used for different crane installations such as **jib** and **bridge cranes**, **studio lighting** and **washing facilities**. By joining different tracks with track joints and using track curves, the sliding action can be arranged according to the desired floor plan and use.
